PROFESSIONAL SUMMARY

I am an enthusiastic final year B Tech, Computer Science Engineering student with specialization in AI & ML and a foundation in programming. I work well with languages like Java, SQL, and Python. During my academic journey, I worked on projects involving web development, database development, and machine learning. I am a quick learner with a passion for solving real-world problems through technology. My career objective is to contribute to innovative projects in cutting edge technologies and enhance my skills in a dynamic and collaborative work environment.

SKILLS

Programming Languages:	Java, SQL, Python.
Web Technology:	HTML, CSS, JavaScript, Node.js, Flask
Concepts:	OOPS, DSA, DBMS.
Tools:	Eclipse IDE, Visual Studio Code.
Frameworks:	Maven, Hibernate, Spring Boot.
Soft Skills:	Problem-solving, Team Leadership, Teamwork and Collaboration, Communication Skills, Multitasking.

EDUCATION QUALIFICATIONS:

B. Tech in CSE spec. AI & ML, Vellore Institute of Technology, Andhra Pradesh CGPA- 8.27	2021-2025
Intermediate (PCM), Sri Chaitanya Junior Kalasala, Telangana Percentage- 94.4%	2019-2021
CBSE, Johnson Grammar School, Telangana Percentage- 90.2%	2019

CERTIFICATIONS

- Java full-stack development – April 2024
- Microsoft Certified: Azure Administrator Associate – November 2023
- Android Application Development - November 2023
- Machine Learning Introduction for Everyone–August 2022

POSITIONS OF RESPONSIBILITY

- Student Coordinator and Registration Committee Member, Vitopia Sports Fest (2023).
- NGC Club Event Management Member (2023-2024).

PROJECTS

Deep Fake Video Detection- 2025 - Team Size -3

- Implemented frame reduction by extracting 1 frame from every 10 video frames for efficient processing.
- Integrated model processing using Inception v3 to classify videos as real or fake.
- Built a web interface using Flask to manage user interaction, while OpenCV handles video frame extraction.

QR Code Generator- 2025 - Team Size -1

- Developed a QR Code Generator using Node.js that generates QR codes based on user input such as URL.
- By leveraging libraries like inquirer and qr-image, it converts the input into scannable QR code in various formats (e.g., PNG, SVG).

Database Admin Authentication- 2024 -Team Size -1

- Designed an interface to write queries to MySQL database and insert and manipulate the data in the existing table in the database.
- This interface helps only the registered users to write and execute queries. The technologies that I have used are HTML, CSS, Java, Tomcat, SQL, JSP, and JDBC.

Hate Speech Detection – 2023 - Team Size-3

- Contributed to the Hate Speech Detection project using NLP and BERT to identify harmful language in text.
- Pre-processed data and fine-tuned BERT on labeled datasets to classify text as hate or non-hate speech.
- Implemented context-aware embeddings with BERT to provide a percentage of hate and non-hate content in the text.

Dice Challenge – 2023 - Team Size-1

- Built a Dice Game using HTML, CSS, and JavaScript with dynamic player name input and dice roll functionality.
- Implemented random dice rolls and compared results to declare a winner or a tie.
- Utilized DOM manipulation for real-time game updates and interactive UI elements.

Drum Kit- 2023 - Team Size-1

- Developed a Drum Kit website using HTML, CSS, and JavaScript, featuring 7 instruments linked to specific keyboard keys.
- Implemented interactive visuals and sound triggers for both keyboard presses and mouse clicks.
- Enhanced user experience by providing dynamic sound feedback for each instrument in real time.
